What's New in the UPnP Port Works?

UPnP Port Works is an application designed to manage your router and monitor the traffic your system exchanges through a UPnP enabled router. With it, you can easily view the port forwarding entries, save them for later reference and perform synchronization tasks. The application is powered by the UPnP protocol, which allows it to quickly and effortlessly detect the presence of a router in the network and display its information such as manufacturer and model name, description and number. Furthermore, it performs a dynamic port mapping scan that enables you to view the data your router exchanges with your system, and a list of other relevant devices, such as printers, PC's and Xbox's. Finally, it provides a detailed view of the router's basic settings that enables you to configure items such as the port forwarding entries, set the refresh rate for the port mapping scan and manage your automatic router connection in an easy and reliable way. In addition to these, UPnP Port Works also includes a handy feature that enables you to refresh your connection, check the device's status, use information about its chipset and check the printer and scanner presence. With UPnP Port Works, you can effectively monitor your system's internet traffic, filter the port forwarding entries, view and save port forwarding data and perform synchronization tasks on your router. You can also adjust the settings according to your needs and preferences. *UPnP Port Works is the property of Xilinx, Inc. and is covered by the Xilinx, Inc. Limited Warranty Policy.
