The company's test program, as it is known, began in December, and it will expand into four or

five new states before the end of the year, Bezos revealed Tuesday at SXSW in Austin, Texas. Bezos said the plan is to eventually service 10 or 15 major cities. The original plan, which was to launch the project in May, was delayed by the California city's outright ban on drones. View photos Bezos says it will only take place in four or five major US states.

More "As we began to think about drone technology and how it could actually work in the real world, we came to the conclusion that we needed to test it outside of California," the CEO said. "We're obviously not going to start flying this drone in California until the law is resolved." The biggest challenge for drone delivery, however, is simply finding someone or something to take those packages to. "That's an enormous cost," Bezos said. "If I'm delivering a package from Washington, D.C. to Los Angeles or New York, there are a lot of people that are going to have to be willing to do that at low cost. "To be successful with this, it's not just about the technology, it's about the economics. It just doesn't work if it's too expensive. We want to be able to get it

down to a price where it's attractive for somebody to pick up the package at a store, something that's more convenient than a trip to a central location. We think we can get there."

cardiotrophin-1 on the survival of cardiomyocytes with limited oxidative stress.

The effects of low and high doses of cardiotrophin-1 (CT-1) on the survival of primary cardiomyocytes with oxidative stress induced by the thiol oxidizing agent, diamide, have been investigated. Primary neonatal cardiomyocytes, prepared from 1 to 7-day-old rats, were exposed to various concentrations of the thiol oxidizing agent, diamide, in the presence or absence of CT-1. The survival of cardiomyocytes, as measured by the tetrazolium dye reduction assay, in the presence or absence of CT-1 was compared under various experimental conditions. The effects of CT-1 on the survival of cardiomyocytes under oxidative stress were examined. The survival of neonatal cardiomyocytes was less affected by the presence of CT-1 than that under oxidative stress alone, and CT-1 had no effect on the survival of cardiomyocytes under oxidizing conditions. When the survival of cardiomyocytes under oxidizing conditions was examined, CT-1 was found to have the

most prominent effect under conditions of physiological oxidizing stress; this effect was particularly marked under 6d1f23a050
